

**Position: Thermal System (B.E/B.Tech or equivalent degree)-Engineer**

**Job Description:**

The Engineer's role is to do extensive literature survey (including but not limited to patent search) and keep looking for the cutting edge technologies employed in our field. Apart from this, he/she will be responsible for the technical documentation part of the project as well. As such, the communication skills of the candidate will be of primary importance with a keen eye for attention to details.

**Additional (Preferred) Technical Qualifications:**

- a) Prior experience in patent searches will be an added advantage.
- b) Help the team procure the technical tools required for the work.
- c) Knowledge in multiple engineering fields will come handy for the communications with the team.
- d) Any other Technical certification would be helpful.

**Required Skills**

- 1. Open to learning new things.
- 2. Excellent communication skills to deal with all levels within and out of the organization.
- 3. Ability to work through obstacles to achieve team success.
- 4. Tackles problems head-on and resolves them without hesitation.
- 5. Have the ability to prioritize and manage several open cases at the same time.
- 6. Demonstrates a positive attitude/energy.
- 7. Able to work on different timing shifts and can handle work pressure.
